This is a lens holder and 1.5" cone to use with the 1.5" focal length lens. The holder will also work for any other lens you choose to place in it.

The lens diameter is 20mm

The 1.5" cone uses the same focus billet as the 2" lens on the FSL Muse hobby laser. This is the older style holder and not the new 3d

You can glue the lens in and add an o-ring if you want it to be the same as the OEM. I tested this on the muse when I had one and it worked fine. I was always a little worried about heat so I printed in PETG. You can also use this file to have one machined from billet aluminum.
