This bracket is made for 10" racks. They have the standard dimensions of 1U (44.5mm) in height and 250mm in width. With these dimensions the mount can be printed on a print bed with the dimensions of 220mm x 220mm. The mount is designed to hold the unit firmly in place without loosening. Therefore, the use of screws to hold the unit in place is optional. If there is a wish to provide further files for other devices, please contact me by message.
