17/08/2023 Update: NOW YOU NEED LESS SPACE. I have lowered the inclination of the upper ramps by one degree, resulting in a maximum design height of only 139.089 mm.

Hello there! I create this model of can dispenser because i couldn't find any with European can measurements. I have printed it with 1 mm skirt, 5mm raft and in the position it is in in the 3mf files.

Attention! the assembly is quite rigid, be careful not to break it when handling.

If you like my design, please like it and enjoy printing!

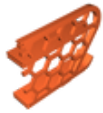

I forgot! the model is divided to be able to print it on surfaces like the Bambulab (256*256*256mm)
