I wanted to remove the radius overhangs on the print but realised the original STEP files were exports of the STL so I've exported clean STEP files as well as made my minor tweaks.

Thread was changed to GL20 thread to hopefully improve printability at thicker layers.

Edit: After looking at my print of the part, it also looks like a dragon side on, so that's a plus I guess too.

If you don't have a 3D printer, you can buy this part from my website:
