The Eiffel Tower with a little wider rod rails to print in small size on SLA printers. Remixed from <https://www.thingiverse.com/thing:912478>

See it before you print it

Preview3D opens **3D models** and **G-code** the way Quick Look opens a PDF -on a Mac, an iPad, an iPhone and Apple Vision Pro.

Point your camera at the code and this **Eiffel Tower** stands on your own table in AR, at the size it will actually print. Nothing to install: it opens as an App Clip, shows the model, and leaves.

Check the fit before the filament. See how big a print really is next to the shelf it is meant for.

Open what can't preview. **STEP, painted 3MF, STL, OBJ, glb, glTF, FBX** and about a dozen more - plus G-code with a layer slider.

Thumbnails in the Finder and Files, so a folder of downloads stops looking like a folder of blank pages.

Publishing a model yourself? Make the same animation for it at preview3d.xfanta.com/qr - paste your model's link and get a **QR code** and a ready-made GIF for every file in it. Free, and it runs in your browser.
