This plant support cage is **designed with an open side** so that you can more easily add it around plants that have already grown, allowing you to **more gently add support** for leaves, fruits, and vegetables **without stressing the branches**. The strong & stackable design allows you to meet whatever height is needed.

This is an easy print that requires no supports, and the STL is oriented as it should be for printing. **Three heights are available** at 11 cm, 16 cm,

and 21 cm tall (the one shown in the pictures is the shortest of the three). All are 10 cm wide, but this model should also easily support scaling as well if you'd like a different size.
