Simple and elegant stand made for the Apple Magsafe charger. Easy to print in place.

UPDATED for both new 2024 and old 2020 magsafe charger versions.

Idea

Inspired by the Twelve South Forté stand used by Apple to showcase the new StandBy mode for iOS. I wanted to create the most simple, easy to use and print stand for the magsafe charger and the iPhone.

Two variants

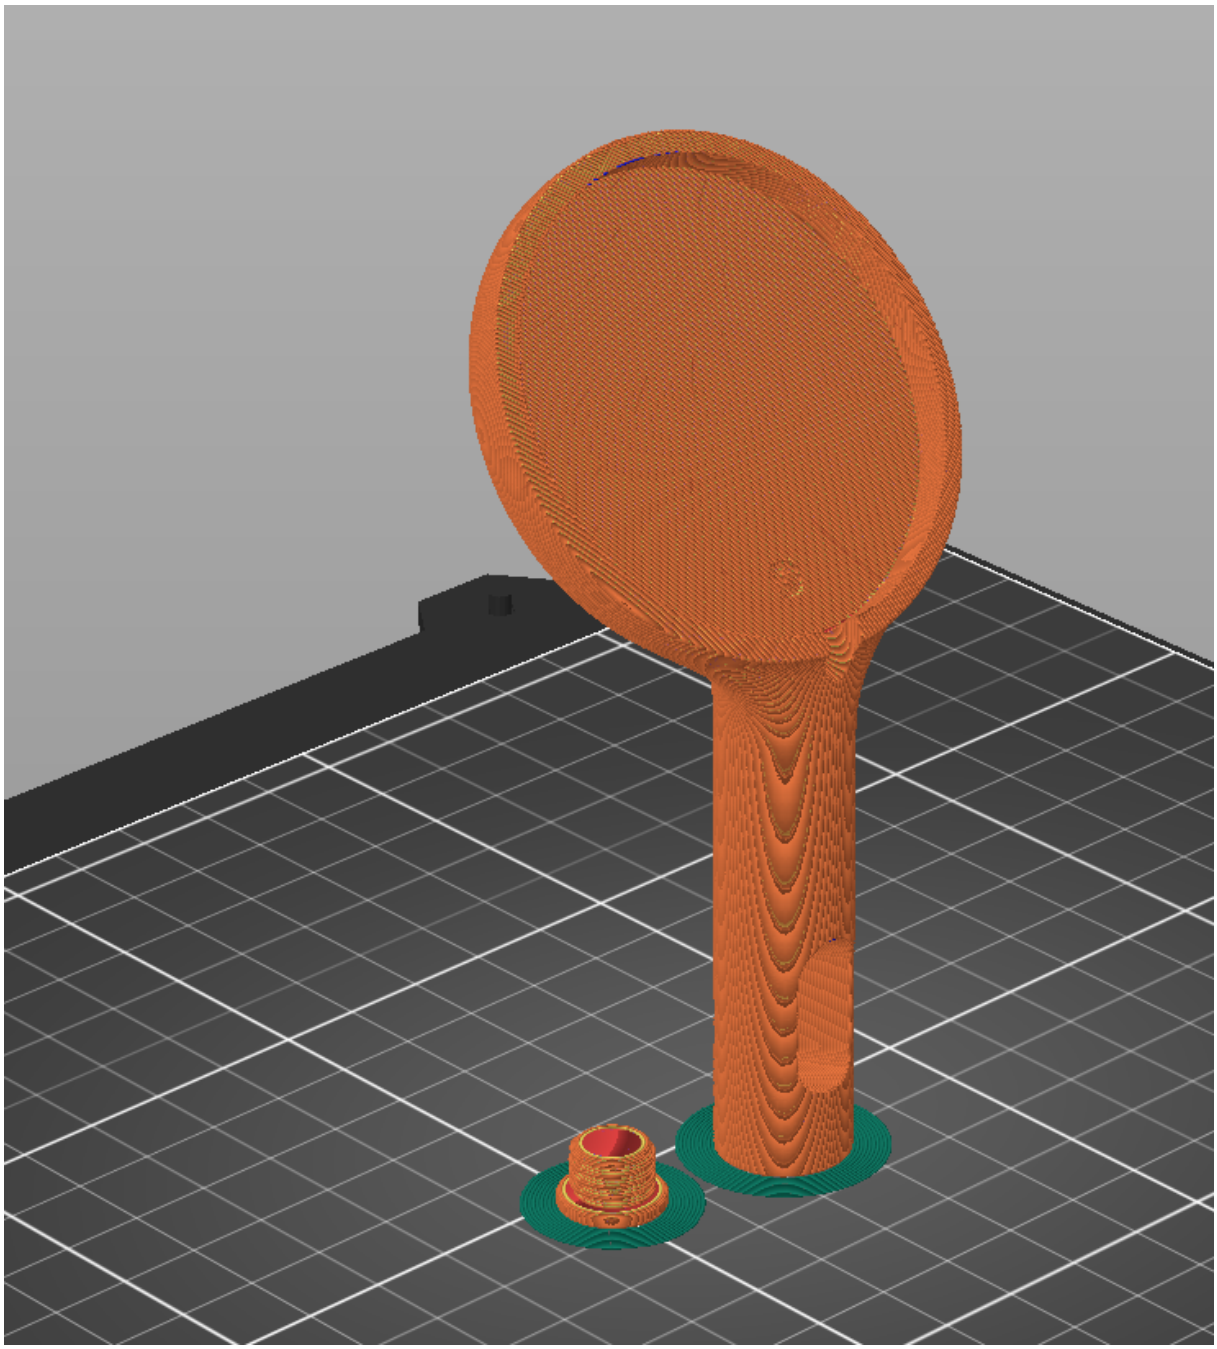
Because I love to have the choice, I created two variants :

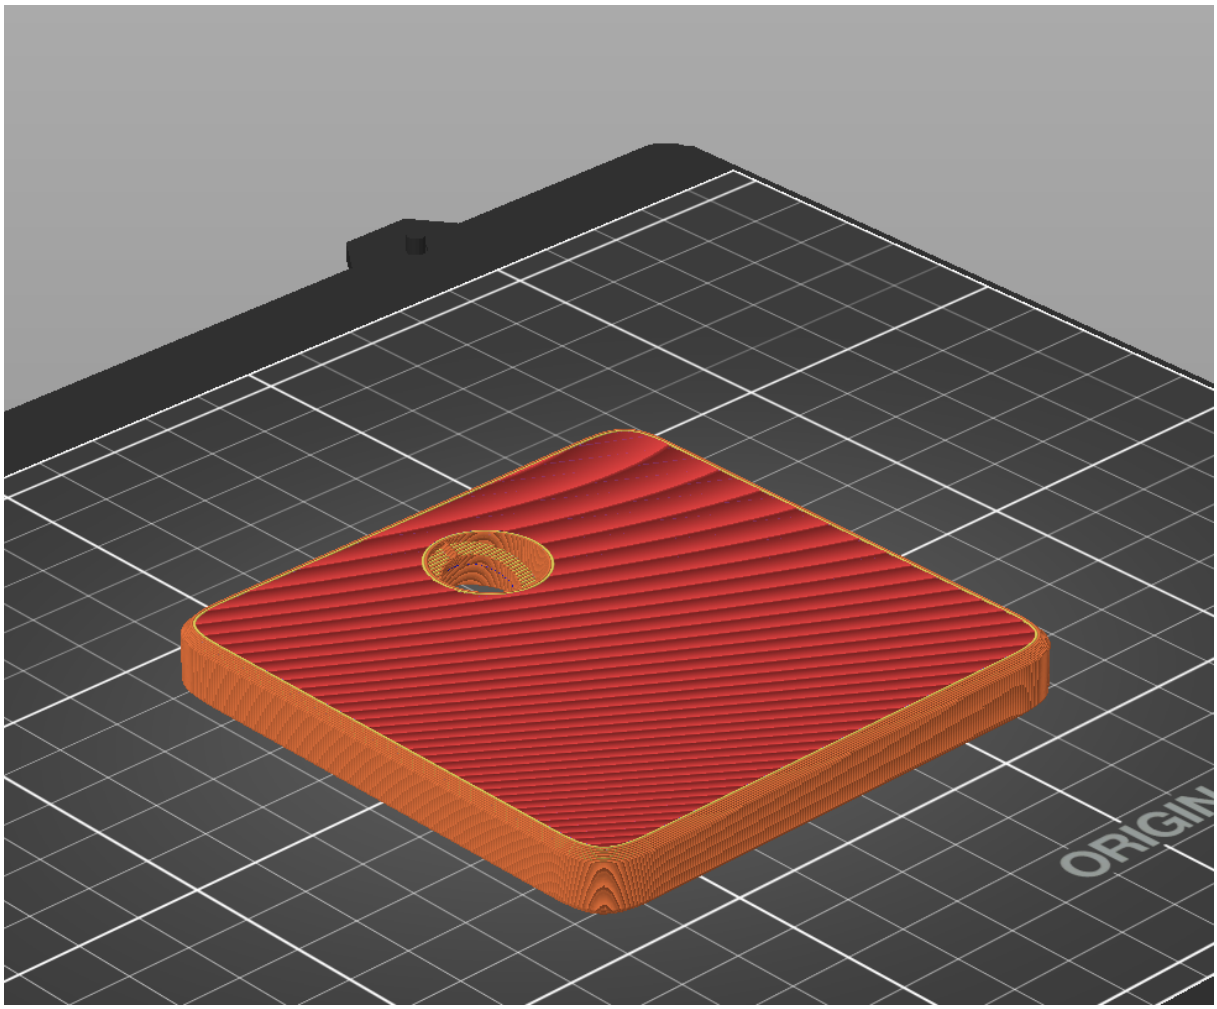
- All in one, single piece, ready to be printed in place with no supports and no brim.
- Split version where the base and the head are separate and held together by a screw, allowing you to choose two materials etc. Also easy to print, with recommended brim only for head and screw.

Printing instructions

I recommend printing at 0.2mm (structural), as is. It was specially designed to work without supports.

For the split version, I recommend adding a brim for stability for the head and the screw, for the base, print it upside down for a better finish on the visible surface, and add a brim if you fear it might detach from the printbed.





Want some more ?

I also designed a clamp version available here.

License
