Designed for 3⁄4" French cleat wall to hold most battery powered hand tools that flare out at the bottom for the battery.

Tools go in upside down facing outward so you can see what you are grabbing not just the back of the tool.

Print upside down, no supports needed.

I use to make these out of wood but wanted to learn Fusion360 design.

Tested with DeWalt and Ryobi as those are the only brands I have.

Works for drills, impact drivers, oscillating tools and much more
