JERRARI3D.com

The GEN2 Tool Organizer Inserts for Prusa MK4 is a storage system designed to store the tools received with your printer to a perfect fit. When a tools is removed it becomes obvious which one was removed, this is the same concept borrowed from 5S foam used to help organize manufacturing facilities.

NOTE: These inserts are designed to perfectly fit a “Double Drawer” from the "GEN2 Modular Lack Enclosure Drawers" storage system found HERE. You can also use this print for really any other drawer or alternative storage.

This video will show you how you can easily take you storage from clutter to clarity!

INSTRUCTIONS

Each section of the GEN2 Tool Organizers are pre-sized to fit the specified GEN2 drawers, but the pieces can be rotated to form a different arrangement if needed.

Split the model into parts allows you to assign a different color for the top layer to create contrast.

(OPTIONAL) Bottom Container

This part utilizes the additional space of the drawer under the tool holders. This is a great place to store infrequently used tools or parts, such as printer screws, lubricant, etc.
