This Evil Puzzle will keep you busy for many many hours!

Simply place the four puzzle pieces within the available space.

Sounds pretty easy, doesn't it?

With both an easy and a hard option, no matter your ability, you should find some enjoyment and satisfaction with this small puzzle.

The folding clamshell puzzle can happily hold all four of the pieces even if you've not managed to complete the puzzle, so is perfect to pop in your

pocket, bag or keep on your desk.

Printing and assembly advice:

Each part can be printed in one piece, without the need for supports. The hinge uses a length of filament to fasten the two sides together, with the two hinge pins capping off each side. You may need a little CA glue to keep them in place.

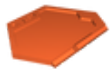

The magnets required are the popular “Gridfinity Magnet” measuring 6x2mm

These are readily available on Amazon/eBay/Ali Express.

Don't forget to post pictures of your makes!

Please try to keep them spoiler-free if you've figured out the solutions!
