Flex-Dregon inspired by the Kidical Mass Vienna Dragons. I made two Verions for differernt Material use. the on labeld PLA has steeper Angles for the Arms and legs. If you have difficulties to Print try to use the Models labeld "ASA". For each version there is also a model with holes for cabletie-fixing the Dragon to a bike. the size can be adjusted in the slicer. the flex still works at a modelsize of 75%.

Enjoy printing!
