Summary

My rods were getting dirty, cleaning them has always been a pain. I wanted something far better to do the job!

This is a tool that does an excellent job at cleaning your rod. It clamps snugly on the 8mm 3D printer or CNC leadscrew, you can remove your hands and let the printer do the rest of the work.

This is meant to be used on any printer with a 8mm OD 2mm spacing, 4 start screw.
