### Summary

The power of the doctor on your keys!

Tags: [keychain](#) [doctorwho](#)

Following the big Doctor Who model, now we have a smaller (and more printable) model for keychains!

The big model prints several parts on thin air (because they are meant to be printed separately and glued in) but this model accounts for that and fits on your keys!

If you have a printer capable of multi color, you can even paint with the correct ones! However, due to the small scale of the model i only recommend printing with 2 colors instead of 3, because is kinda easier to the printer and printing at 50% so that the small letters can be correctly done.

I added the 3MF file that i printed, it should already be painted and with the settings that i used (apart from the 50% speed)

The ones i used are

- Blue is Polymaker Polyterra Sapphire Blue

- White: Any white will do
