HSW Universal Controller Mount

Small controller mount for Honeycomb wall storage (HSW) system. I've tested it with Xbox one/series, PS4 and switch (pro) controllers. Designed to match the HSW esthetics.

Two versions available:

- Insert version that you can use in combination with the hollow inserts from [the original HSW model](#)
- Connector version that will fit directly in the HSW
 - You might need to adjust the scale to get a nice fit

I've printed in PLA:

- 0,2mm layer height
- 3 Wall Loops and

- 15% infill
- No brim

However, I feel like it can handle quite a range of settings and materials.

Please let me know you're experience with other controllers. This is my first upload so tips and comment are welcome!
