QR Code Keychain

- from **ElectricMagpie**

Introducing the QR keychain! This .f3d file is an easy to customise, slice and print template for you to personalise. A unique way to show off your

printing skills whilst also guiding your audience to your printables.com profile where the rest of your amazing designs await.

Recommendations:

Customisation

- Create and **download** your QR code
- Use the 1mm grid with a canvas of your code to create your QR pattern.
- **Download** FreeSans Bold font for Printables.com logo

Slicing

- Scale up to 125% when slicing
- Create a colour change profile

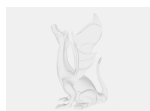

Printing and finishing

- Chose colours that compliment and contrast for best results
- Adjust speed and heat to maximize detail
 - I slowed my print down to 50% after the colour change.
- Remove unwanted top layer texture with your preferred method
 - I used sandpaper and a nylon brush

If (like myself) you are limited to light colours, the base layer is thin enough that shining light through the back of the print will produce a silhouette a camera will identify.
