0.40 mm

PLA
PET

42 g

Prusa
MK3/S/S+

[Gadgets](#) > [Portable Devices](#)

Iphone 7, 8, and SE2020 case that should be printed with solid materials like **PETG** or **PLA**. I recommend **PETG** as it provides just a bit of flex to the case which can help with getting it on and off. **PLA** will work just fine just be careful when taking it on and off your phone, and also try to not use a really brittle **PLA** like polyterra. Also if you are using a smooth PEI sheet you should apply a layer of glue stick in the print area. There are pre-sliced gcodes for both **PETG** and **PLA**, I recommend you use them.
