General

I have a small Franklin hand pump for airing up sports balls and children's bikes but the pouch it came with for storage has no way to hang it up. I designed this simple slotted adapter to allow the flap from the top of the pouch to hang through it and provide a hole for storing it on my Gladiator gearwall hook.

Printing

I printed mine in Jessie ice red PLA on 0.2mm layer height speed profile on my MK4 with input shaper.

Usage

The bottom section is intentionally thin so that it can flex slightly to get over the snap for installation but doesn't easily slip off the top flap and is retained by the snap's thickness in normal use.
