---

A built-from scratch replacement for the mounting piece of the linked thingiverse model: <https://www.thingiverse.com/thing:2084339>

This version is designed in FreeCAD with the files attached so that anyone can adapt it to their needs if desired.

This adapter allows the same great design of that model to be used on a Geeetech I3 Pro. I've used this design for a long time but just got around to making this adapter. Previously I'd drilled and tapped a new hole in the mounting plate on my print head, and put one of the screws into that. It wasn't very stable.

This adapter conveniently aligns the mounting holes with the provided holes on this printer model.
