### Summary

This is a cupholder for the large style bell bottomed reusable insulated cup.

Tags: [cupholderadapter](#)

The bottom fits in my car's cupholder, and the top is larger to fit the insulated cup that wouldn't fit anywhere else.

I'm not sure how standard car cupholders are, but it fits snugly in a 2014 Ford Territory!

If you live in hot places like me, don't print in PLA, it will shrink in the car and no longer fit anything. PETG seems to have solved the problem. Hasn't warped in pretty hot temps now.

### Print Settings

- Printer brand: Prusa
- Printer: i3 MK3
- Rafts: No
- Supports: Yes
- Resolution: 0.3 mm

- Infill: 20%
- Filament brand: Filoform
- Filament color: Black
- Filament material: PETG
- Notes:

I left the bottom hollow to save on printing time so I could just replace it with support instead of infill. You may not need support for it on your printer, but I left the supports in for some extra heft.
