This model has different radius on the curve to fit the stock tenere bars snugly. You can slide it to make it tighter.

I have used it for sometime now and it's staying in place without ziptie.

I also added version with ziptie hole but I haven't printed or tested that version.

Print it on it's side so it's flexible and strong on the part that goes over the bars.

I used PETG. ASA/ABS and PA-CF would be ok aswell. PLA most likely will melt in the summer.

---Update June 2024---

I've used this for couple thousand kms in mostly summer but also during winter and it's working well. Printed in PETG
