Tags: [wall](#) [holder](#) [mount](#) [headset](#)

i build in three USB plugs. one to connect to the PC data, one for the receiver date at the top, and another one at the bottom for changing USB plug, 5V only. DONT! try to make one USB plug into two, it won't work

you probably be fine. but if you damages your headset, computer, it's or any other devices building this, it's on you...

it can be printed without support, but depending on your printers bridging calibration there may be a little cleaning for the USB sockets.

to mount it on the wall i uses a 4.5x60 screw with a raw-plugs a longer screw will be fine too
