This inlay uses an Altoid container as an **ultra-compact live bait and lure box**. The main compartment is big enough for a number of worms and soil to keep them happy for a while (I've already both tested and used it successfully), and has a lid to ensure that the mess stays in one place :-). After testing the first model, I made small adjustments to allow me to put a piece of tape (as seen in the pictures) to help lift the lid off more easily.

The other compartment, while small, still has room for hooks, a lure or two, and other small items you want to take with you.

If you are looking for something particular you can't find or would love a slight modification of my models to fit your specific need, just let me know and I'll see what I can do.

If you like what I do I would appreciate a like, but even more so a comment

or a picture of your printed model and how you used it. Also, take a look at some of the other things I made here:
