I bought the Ikea Vidga curtain rails to replace the ones at home, during installation on the ceiling we managed to break 2 of the connectors between different rails.

mocked up this easy to print easy to install and quite sturdy replacement.

you insert the flat pill, and with a hex key or flathead screwdriver you turn in the locks. they are slightly angled so that they will lock when everything is tight.

this is currently only for attaching it to the ceiling, i can try to make the other use case too. But depends if people use this. As i need some assistance in confirming it works then.
