A simple key tag that is fully customizeable!

This key tag is designed to be printed with **0.4 nozzle** or **smaller**. To print with **bigger nozzle** please **scale it up** until you can see everything slicing **well** in your slicer, especially the **text**. If you want, you can also make it multi colour. The base plate in 1 (or more) colour(s) and the text in another colour(s).

To edit the text:

First download the **.f3d** file.

1. When opened in fusion 360 **double click the text sketch**.
2. Then double click the **letters/numbers** that turns **blue** and edit **text**.
3. If the text is too big, play around with the text scale until it fits nicely.
