Part of my State College PA bar signs collection. I made these on my Prusa Mini, so to have the color changes, I did a filament swap for each layer.

The Shandygaff or Gaff has two logos and I thought this was the cooler one. I had to manipulate the gcode to get this one to work. Since it has 2 different colors of transparent pla I needed to have 2 colors on the same layer for the gcode. There was probably a better way of doing this and it didn't turn out that great.
