Update 6. Aug. 2023

The STL ist about an 1cm larger than what you see on the Lavazza photo. You can print it a little bit smaller if you want. Especially if you put you coffee bag into a Kellogg's tin can as shown in the background.

Update 5. Aug. 2023

I didn't recognize Fusion didn't save the size. So I reexported the STLs and also closed the angle as you weren't able to print it on small printers (I own a SV04). Printing it today again.

I wanted to use this clip for a standard 1kg coffe bean bag and even the large version was way to short. I edited the project and lengthened the clip 3cm. The rest stayed the same. It is still hard to open it af. So either live with it (I use a knife to pry it open) or cut the overhang a bit.
