[steamdeck](#)

A steamdeck mount / dock that is meant to fit under a desk or mantle.

The hub mount is meant for a [UGreen 5-1 hub](#). This particular model ignores the ethernet slot as I did not care to use it. The fusion360 files are attached if someone would like to modify.

Printed on a Bambu X1C using PLA Tough. I'd recommend using a non-matte / tough PLA as some of the pieces can be fragile otherwise.

Infill: 20%

Nozzle: 0.4mm

Note about the attached files:

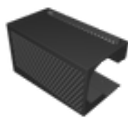

There is one file with and without the mount for the hub for each side. This is also provided separately if you'd like to glue it on (maybe in another version I can make this magnetic or something).

I have also attached a weird USB-C plug holder, this is really finicky so use with discretion. It requires glue to attach and is not the easiest thing to get working as you have to mount the side with the hub, plug in the usb so that it attaches and then figure out the other side. I likely won't be making another, but please feel free to remix.

☐ This is finicky, requires glue and careful mounting. May not work
