This standing Retro TV enables you to turn your everyday phone screen into a Cute Media Centrepiece.

Just slide it in from the gap on the left.

It comes with swappable faceplates and hats, more of which I plan to publish along the road. Simply insert the faceplate into the grooves at the bottom of the base, and snap it in place. The antenna / hat mount doubles as a release mechanism for the faceplate, a flathead will help in gently nudging the latch back open.

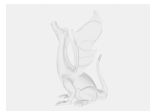

I find it best to print the faceplate, base and other components in separate colours. I have also added profiles for if you wish to print everything out of the same material, or if you only wish to print the base separately.

Should you slice it yourself, I find increasing the walls to 3 helps with masking the relatively sparse infill which may glow through when the

stand is empty. As well as adding supports for the faceplate clip and hat mount clip.

In my show-model, I have also used PETG and ABS as materials and while the latter warped a bit, I can confirm they work fine, and might even be preferred for the legs.
