### Summary

Created so that it is easier to use and align the bed clamps I use with glass beds. Spaced to avoid nozzle interference.

---

Got tired of trying to get the correct placement of my bed clamps. Model also available with an overhang to help protect the surface of the glass bed from the metal clamps.

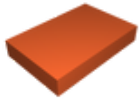

Too far in they would get hit by the nozzle; too far out they aren't as stable.

Made for 7mm Creality glass bed on an ender, but should be usable for other combinations.

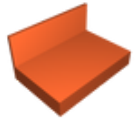

Best results from printing in vase mode.
