Wall mounted keys and masks hook*

'* and for everything else, as you like :)

I needed a small hook next to my door to organise my keys and the arduous mask. I saw something similar on Am*zon for jackets.

Mounting Video:

There are 3 parts:

1)**KeyMaskHolder_Template.stl** => use this to align the screws, screw them in the wall so that the template can be removed with a slight bit of resistance

2)**KeyMaskHolder_Base.stl** => The main part

3)**KeyMaskHolder_Peg.stl** => The pegs, slide them in from the bottom. They should fit very tight. **You need 5 pegs**

2 Screws are required (I used 3,5 x 20 Screws, flat head)

Notes:

Printed with 3 perimeter

Post-Printing

Step 1

Insert the Pegs from below. Some little force is needed ;)

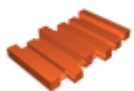

Step 2

Use the template to find the desired position. Screw the screws in, assure they have a tight fit. Thereafter remove the template

Step 3

Slide the key hook onto the screws
