Summary

Reuse your old Onewheel tires as planters!

I was frustrated with the number of tires kicking around my house, so I decided to design a model to convert them into planters for my balcony! Complete with sufficient drainage I'm planting tulip bulbs in them, so we'll see how well they do in the spring! I printed in PETG for UV and chemical resistance with 5 top and bottom layers to prevent water ingress and pretty low infill, maybe 10%. It is a friction fit with the bead of the tire! it has fit a maxxsis 6.5, a flightfins t2 by hoosier, and a tfl enduro no problem!
