### Summary

Bulbasaur's running my extruder!

Remix of the [Pikachu Motor Rotation Indicator](#) by GedKerezis, which itself is a remix of the [Hamsterwheel Extruder Indicator](#) by Ardjan.

The wheel is just as it was in GedKerezis's design, and it prints amazingly without supports and the endcap fits great.

This one's for the Bulbasaur enjoyers.

Bulbasaur will need supports up to the bottom of the chin, and at this small scale they're likely going to be a bit difficult to clean up. Mine has a lot of support artifacts on the bottom, but frankly I didn't work too much on them as I'll pretty much never see the bottom.

If you'd like the same Bulbasaur as a charm without the cutout needed to fit the hamster wheel, I uploaded that [here](#) while I was working on this.

That one won't fit the wheel, but it's a happy accident as it turns out. He lives on my keys now.

## This remix is based on

### Hamsterwheel extruder indicator

by Ardjan

### Pikachu Motor Rotation Indicator

by Ged Kerezis

## Model files

### bulbasaur\_cutout.stl

☐ The cutout is needed to fit on the wheel. Mirror the model to have him run left.
