I used these to mount my led strips at an angle so the light from the LED strips would shine more on the spices, (these were used in a spice rack). You can use an adhesive to fix them to the glass, or heat them up very carefully, and bend the tab to make the fit even more secure. Enjoy :) Recommended use for 1/8" thick glass, (.120" was the actual size of my glass, hence the heat to bend it to make it fit better). Use the included clip to hold the LED strip. One end of the clip is bigger than the other end, (the half circles). Insert the bigger end first, then clip together afterwards.
