I made this to join two pieces of wood together to build a frame. When you stack the two pieces of wood on top of each other, you can screw three screws in from the top, and 4 from the side for added strength. The top holes are offset on purpose as to help prevent splitting the frame, putting the screws inline would split the frame easier.

It may be a little difficult to understand, so I included some pics, a few are low quality, but you can see the grey printed piece and hopefully that will help :)
