Hi,
here is a Laser warning sign (DIN 4844-2, ISO 7010). I also added the Fusion360 file (.f3D) so you can customize the sign as you like. For example you could add holes for nails, change the thickness or add holes for magnets.

I've uploaded two version of the sign, one with 1 mm base height and one with 0.6 mm base heigt. My yellow filament is pretty translucent, therefore 0.6 mm base was too translucent for me. If you open the .3mf sclic3r file the colorchanges are already added.

Feel free to leave me some feedback and please let me see your prints.

Print Settings

I used the 0.2 mm Quality Sclic3r settings on my prusa mini. If you print the thin version of the sign, there is no need for infill.
