---

Tired of using electrical tape to bridge the screen gaps on your resin printer? Looking for a neater solution? Well, here it is!

This is a vinyl screen gasket for the Phrozen Sonic Mighty 8k resin 3D printer. The cut file allows room for a screen protector to be used. The gasket is made to butt up against the edges of the screen protector, not overlap. The steps to make the gasket are as follows:

1. install screen protector (optional)
2. download the .dxf file in this post
3. import the .dxf into your vinyl cutter software (silhouette studio, cricut design space, etc.)
4. load vinyl into your machine and cut
5. install your new and neat vinyl screen gasket! Firmly press down all edges
