updated 26. 5. 2024 | published 26. 5. 2024

Summary

A picatinny rail for the Dart Zone Outlaw nerf blaster!

Tags: [blaster](#) [nerf](#) [revolver](#) [nerfmod](#) [outlaw](#) [nerfblaster](#) [dartzone](#)

This remix adds picatinny rails to the Dart Zone Outlaw! It's longer than RedCowl's original model, to give the front of the blaster a chunkier feel.

Like RedCowl's design, this is a drop-in that replaces the front rails and re-uses the screws. Simply remove the rails and install these new parts in their place!

Print this part with the front face on the print bed - files should be pre-oriented for this. The parts will require Supports, for the posts.

This is not an original idea - see the Remixes section for more. However, my version is based on the STEP files from RedCowl's design, and is a bit cleaner in my opinion.

If you like this design, please see my other mods for the Outlaw!

Shrub Cylinder - Dart Zone Max Outlaw

Fidlock Plate - Dart Zone Max Outlaw

UPDATE 01/13/2024:

- Added hole placement for a Fidlock plate.
- Minor geometry tweaks.

UPDATE 05/26/2024:

- Replaced file type with STL for wider compatibility.
- Tweaked Picatinny rail geometry to better match the standard.
