This adapter makes it possible to turn a regular caliper into a depth caliper. Verify that the caliper possesses the depth bar, and check whether or not there is a screw on the back to choose which body use.

You need:

- 6x8mm M3 screws
- 15mm M3 screw

Can measure objects with a maximum height of 80 mm and maximum depth of 34 mm with a 150 mm gauge. I modeled my adapter for my Tacklife gauge.
