### Summary

These feet prevent sliding and compensate for height differences, allowing the bed to stand level on an uneven floor.

These feet prevent sliding and compensate for height differences, allowing the bed to stand level on an uneven floor.

You need the FreeCAD file, 'Feet.FCStd', to adapt the height of the feet for your own purpose.

Printed with PLA plus, set the infill high enough to prevent breaking through the floor of the feet.

I used double sided tape to stick the bed to the floor and prevent sliding.
