Summary

Alternative CAME 2 gate remote control

[Hobby & Makers](#) > [Electronics](#)

I accidentally damaged the housing for the CAME SPACE 2 remote control for the garage door.

I designed the housing in a different shape (more suitable for a car key). Once printed, simply reposition the electronics and use the screws from the original housing

Materials:

1. housing: Impact PLA Fibrelogy
2. button: Bambulab Basic PLA

I am attaching the Fusion360 file if anyone would like to make their own version.
