Summary

Holds a lithophane on a cheap night light for a cool effect. (Link for night light included).

I wanted a cool way to display a lithophane, so I designed this to mount onto a **night light**. I think that the end result is a pretty cool effect. I linked to the night light that it slides over. If you have a different night light, I'm sure I could design one to fit yours with just a few dimensions.

This version uses very minimal filament and prints in under an hour on most printers.

It fits a portrait orientation lithophane from **It's Litho**. These are 100mm wide by 4mm thick.

Update: I added parameters and the F360 file so you can adjust for different width and thickness of the lithophane.
