Summary

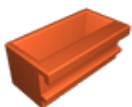

A little accessory box that connects to the side of the printer frame.

I've updated the STL with narrower connection pieces so it's not such a snug fit. I recommend printing with 4 perimeters to give those bits some more strength just in case. When fitting to the side of the printer, place the top strip in the frame first then press it down to then push in the lower strip into the frame.

Model files

kobra-go-tool-box-v2.stl

☐ Reduced the connection pieces widths so it's not so tight
