Summary

Paint Cup With Brush Cleaners and Brush Brackets

[Hobby & Makers](#) > [Tools](#)

Got tired of using a little glass bowl to clean my brushes, so I designed and printed a brush cleaning cup with built in drying brackets. Print however you'd like, no supports needed if you print in the standard orientation. Cap is separate for ease of printing, and in case you want to print the cap out of something flexible like TPU.

If your printer is dialed in 2-3 walls should suffice for being waterproof. If not, you can brush and cure with resin, or any number of other materials that will fill in gaps.
