[spares](#) [wooden](#) [dowel](#) [breaket](#)

Recently I needed a wooden dowel in a pinch and couldn't find the exact size I needed so I've designed my own. I also looked through multiple IKEA spares website and designed what I thought would be suitable to be 3D printable. Testing everything that I could with furniture around the house!

All parts include original design files if you need to make any changes!

Wooden Dowels

- I would recommend printing these upright with a brim (unless you have a lot of trust in your printer)

Wardrobe Rod Holder

- Unfortunately, support will be required for this one just because of the nature of the shape.

Part #106422

- Best printed in the orientation it loads into slicer - designed with 3 layer gap (at 0.2mm) for the part that holds screw it to expand.

Update 07/11/2023

Added Part #101412 (Pinnig Coat Rack Wall securing Spacer - Originally rubber can be printed in TPU or PLA)

More parts coming very soon! Mainly CAM Lock Nuts (ones that lock at 90 Degrees!
