Summary

Halloween wouldn't be spooky without skeletons. What about a cat skeleton?

This is a great addition to your Halloween collection. Halloween wouldn't be complete without this purr-fect and haunted cat!

Sculpted and created fully in Blender. It took me about two weeks to make it.

All the parts are orientated to the right position to print. It takes about 6 hours to print all the parts. Stands about 15 cm tall. Use supports. Use 15% infill and 0.20mm quality. I printed mine in PLA on a Prusa i3 MK3S.

Update: Added a head without ears, as requested from multiple people.

Happy Halloween!
