[mountaintopography](#)

Create your own mini rock garden for the the kitchen or office table, or anywhere you want to bring in a terraced rock formation! Inspiration from Monument Valley, USA, or terraced mountains of Asia. I also take inspiration from modern landscape design and architecture.

You can have a feelgood microvacation and dream away in the minigarden right on your desk!

Very easy to 3d-print and the result looks absolutely great. I used Fillamentum/Concrete Grey filament for this model.
