Summary

Nightstand holder for my iphone 11 pro max to use the StandBy feature of iOS 17.

[Household](#) > [Bedroom](#)Tags: [holder](#) [stand](#) [iphone](#)

Hi everyone,

this is a holder for my iphone 11 pro max to screw onto my nightstand. It allows the usage of the StandBy feature of iOS 17 but also to watch youtube videos while laying in bed. The holder is desingt to allow charging and holds the phone in a 5 degree angle so it leans slightly to the back.

I used two counter sunk wood screws to screw the holder into my nightstand.

Update 1:

- Added recess for the volume rocker
- Increased thickness for easier gripping the phone
- Increased height for better stability
