## Summary

Organizer to hold The Artemis Project (base game) along with all mini expansions along with Satellites and Commanders)

[Toys & Games](#) > [Board Games](#)

Tags: [boardgames](#) [boardgamesinsert](#)

This is an organizer for the Artemis Project that includes all currently available upgrades and expansions

- Satellites and Commanders
- Diecast snowcats, event markers, and satellites
- Directives mini expansion
- Alien relic expansion
- Tantrum house expansions

Refer to the photos to see how things line up. In order to make everything fit, I had to create a new shakeship as well. The bottom of the shakeship is intended for the commanders, the rest of them should all fit in the top without issue.

There is one part in here (Leveler) that just fits into place under the building groups and the shakeship to help keep things in place and the

right height. This is not strictly necessary and when I revise this design I will likely get rid of it.

Supports are helpful on the directives/satellites cover print along with the revised shakeship parts.
