Tags: [bottle](#) [bathroom](#) [thread](#) [aesop](#)

Bottle couplers to allow you easily join **Aesop** bottles so you can drain the last bits out which the pump doesn't reach. No more balancing bottles on top of each other! Join them, leave them overnight and let gravity to the work.

Three sizes provided which cover most of the available Aesop container types (at least the ones you would want to drain). The medium size is shorter to allow both glass and plastic bottles to be coupled.

Trivial to print, should work well with any material but PLA will probably be the most straightforward for dimensional stability.
