My best attempt at a 'cool' looking, ergonomic - easy to use in gloves, de-icing scraper.

Print on the larger flat side as in the image, takes around 2-2.5 hours at 100mm/s at 0.2 layer height with a 0.4 nozzle and no supports.

I recommend rubbing the 'blade' part against something rough and flat or sand lightly before use.

Be careful on the roads guys. Also be careful with your paintwork and these scrapers.
